

Heavy duty, 12" opening, polymer concrete trench drain system with ductile iron edge rail

Typical applications

- Airports
- Highways
- Heavy duty industrial areas
- Gas stations
- Docks & ports
- Semi-truck parking areas
- Military bases

S300K - Ductile iron edge rail, sloped, trench drain system

S300K is a modular interconnecting 1-30 trench drain system with a 12-inch internal width. The system has four neutral channels that can be used to extend runs beyond 30 meters (98' 5"). Half meter unit can be used to create 90 degree bends or reduce the amount of site fabrications.

Each channel has a 6" and 8" drill-out in the base. A complete set of accessories are available to complete the system.

PowerLok - boltless locking system

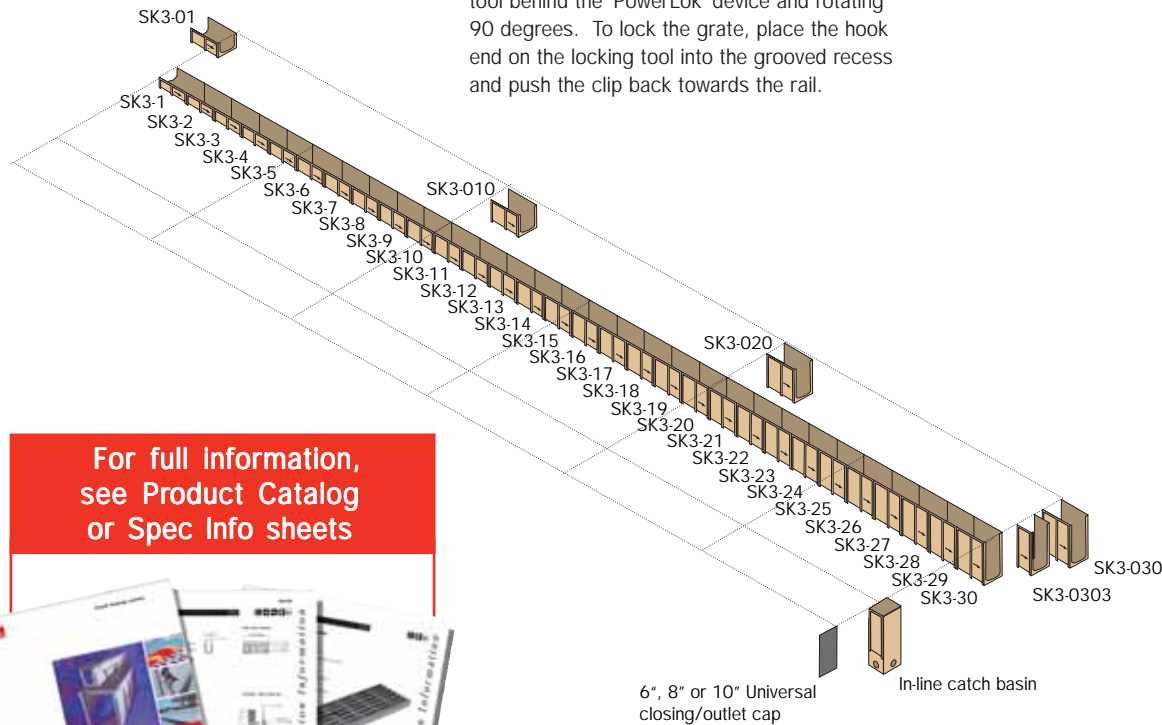

'PowerLok' is a patented, boltless locking system offering quick fitting and removal of grates. Use of 'PowerLok' reduces installation and maintenance time and cost. Anti-shunt lugs are built into the edge rail to hold the grate in place and prevent longitudinal movement, thus ensuring the grate is unaffected by traffic vibration.

'PowerLok' is opened by inserting the locking tool behind the 'PowerLok' device and rotating 90 degrees. To lock the grate, place the hook end on the locking tool into the grooved recess and push the clip back towards the rail.

ADA ductile iron Class E

Slotted ductile iron Class F
